Cloud computing

Cloud Computing relates to the IT infrastructure required to develop/host/run IT services and applications, on demand, with consumption based pricing, as a resilient service.

Communicating over the internet and requiring little or no client end components it provides resource and services to store data and run applications, from many devices, anytime, anywhere, as a service.

The services can in turn be scaled up and down as needed to meet a customer's variable operational needs, ensuring maximum cost efficiency.

SaaS (Software-as-a-Service)

Software or applications accessed over the internet, requiring no installation on local machines.

IaaS (Infrastructure-as-a-Service)

Delivers computing infrastructure, such as RAM, CPU and storage, along with networking capabilities, to effectively provide a hosted data centre or server on demand for running software or applications.

PaaS (Platform-as-a-Service)

Delivers a platform where the management of the infrastructure is automated and effectively hidden from the user. Typically refers to the environment within which developers can build & launch new applications from.

Cloud benefits

1 Availability (delivered on-demand)

A user can chose to provision computing capabilities, such as storage, processing, network and memory, (or an application) as needed automatically without requiring human interaction with the service provider & services often have built in resiliency and recovery

2 Flexibility (agile & scalable)

The amount of resource consumed by the user can be increased or decreased to meet their operational needs. Supplier capabilities for such a service appear unlimited and available in any quantity and for any amount of time

3 Chargeability (charged based on consumption)

Users only pay for the services they use. All resources should be easily monitored / managed so that charging & use is clear and transparent

4 Accessibility (accessible anywhere)

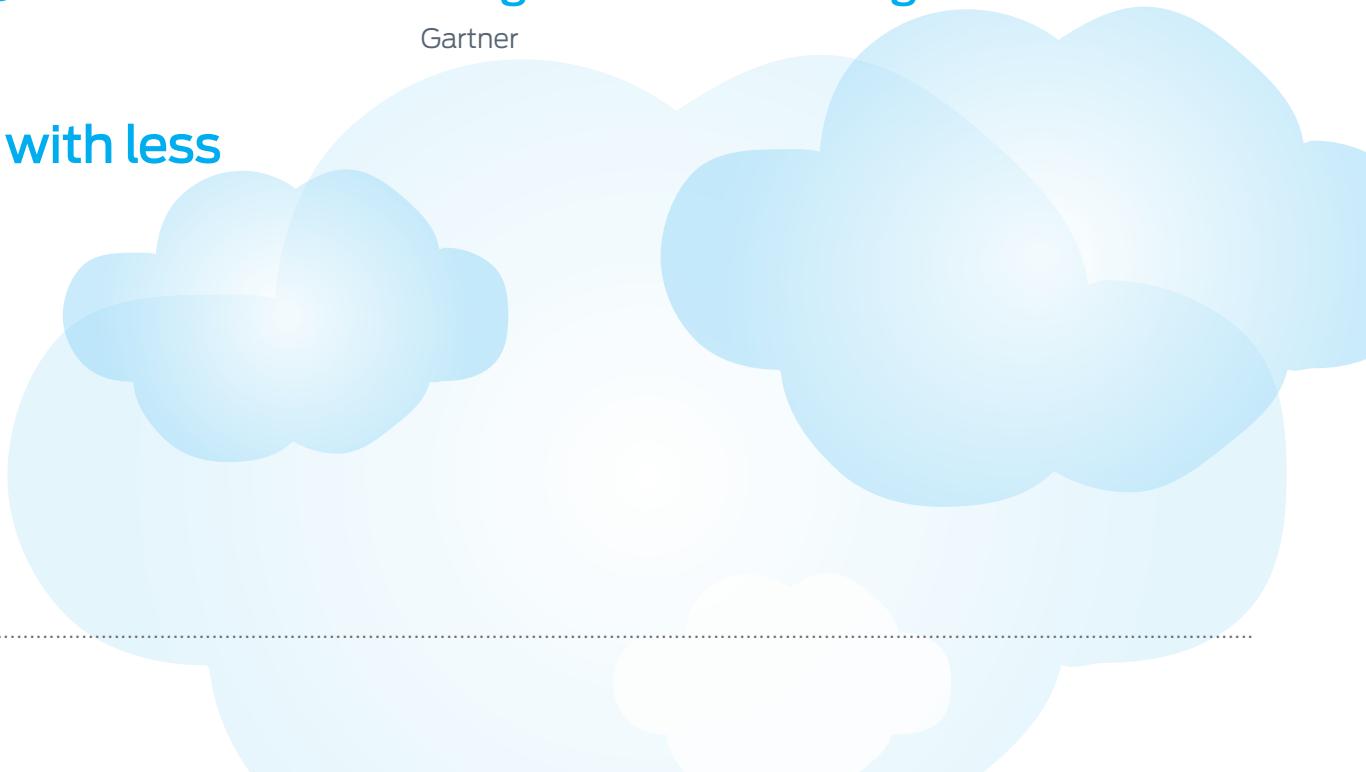

As cloud & hosted services are delivered over the internet and accessed through standard web interfaces, uw should be able to manage and/or consume services anywhere there is an internet connection, using the device of their choice

Public Cloud

- Used by multiple parties at once
- Provide maximum value for money using shared architecture
- Many operate internationally for scale and/or resilience
- Shared infrastructure, often with less configuration capability

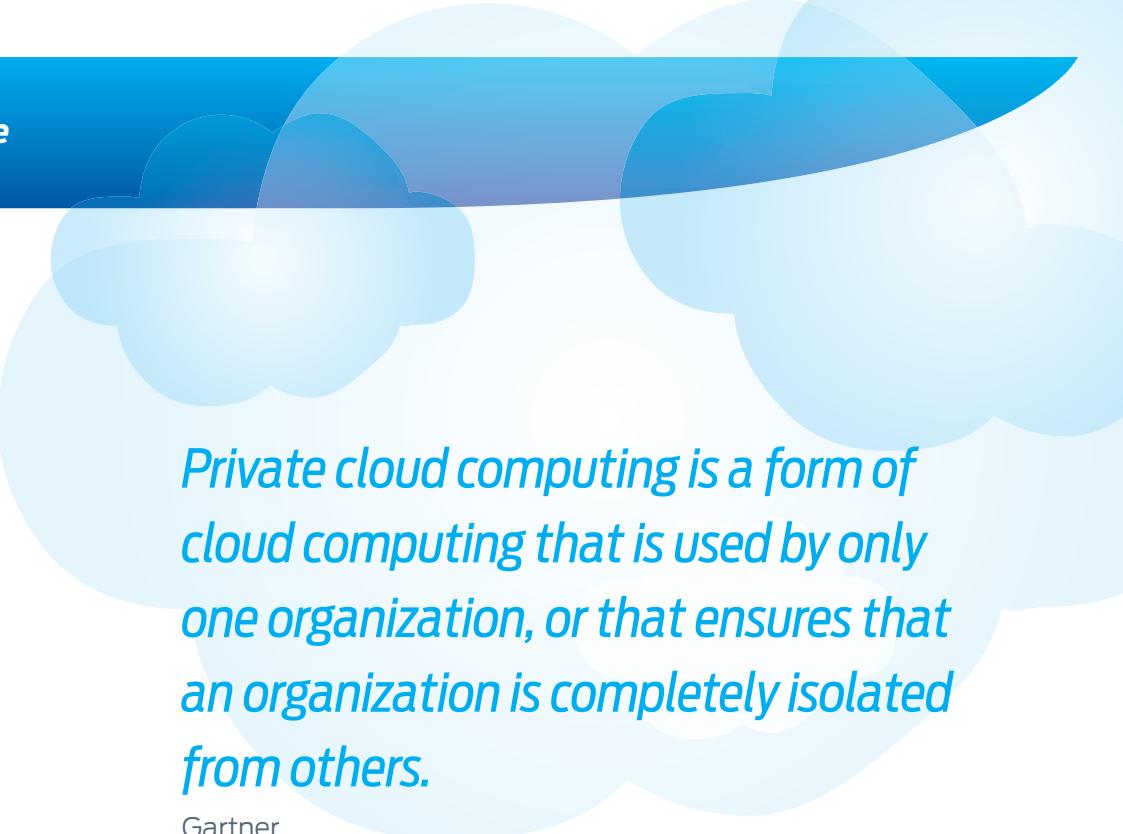

Public cloud computing is a style in which scalable and elastic IT-enabled capabilities are provided as services to external customers using Internet technologies.

Gartner

Private Cloud

- Resources are restricted to a single customer or community
- User retains higher control & configuration
- Can be run locally or hosted by a third party
- Typically IaaS model associated to it

Private cloud computing is a form of cloud computing that is used by only one organization, or that ensures that an organization is completely isolated from others.

Gartner

Hybrid Cloud

- Joins public and/or private clouds together, or with on-premise infrastructure
- Often used to expand existing IT networks and systems using an alternative platform
- Networks can be expanded using VPN to create seamless integration

Hybrid cloud computing refers to the combination of external public cloud computing services and internal resources (either a private cloud or traditional infrastructure, operations and applications) in a coordinated fashion to assemble a particular solution.

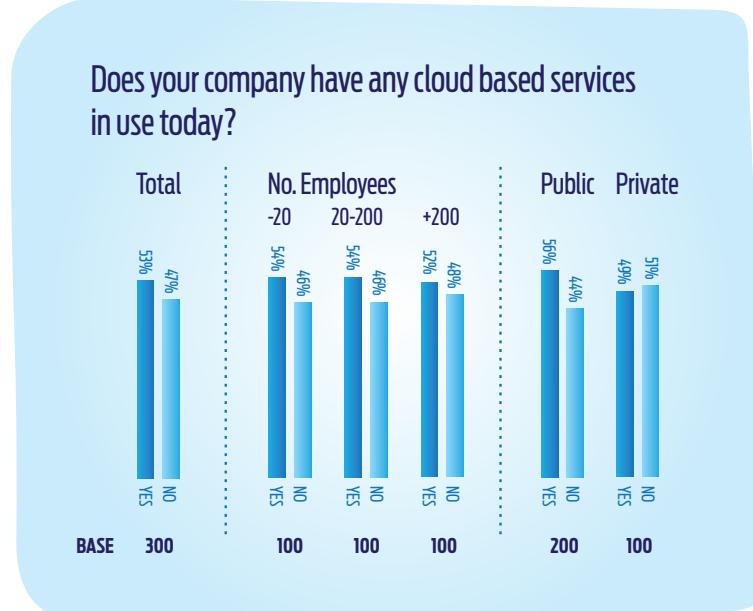

Gartner

SMB's buying cloud today

- Cloud is being used today by many businesses
- Growth over the next 2-3 years is forecast to be considerable
- Over 70% of SMB's require technology that enables staff to work anywhere, anytime
- Private sector is leading the way, but the public sector is catching
- Size of company not the factor in cloud adoption rates

Employees	2-10	11-25	26-50	51-100	101-250
TODAY Current adopters	25%	41%	53%	58%	60%
2-3 YEARS Next wave	51%	42%	32%	29%	31%
3 YEARS Total using Cloud	76%	82%	85%	87%	91%
2-3 YEARS Non adopters	24%	17%	15%	13%	10%

Who is buying cloud?

- Head of IT primary decision maker for cloud adoption
- MD/CEO key factor for micro & very small businesses

Source: Edge Strategies Research

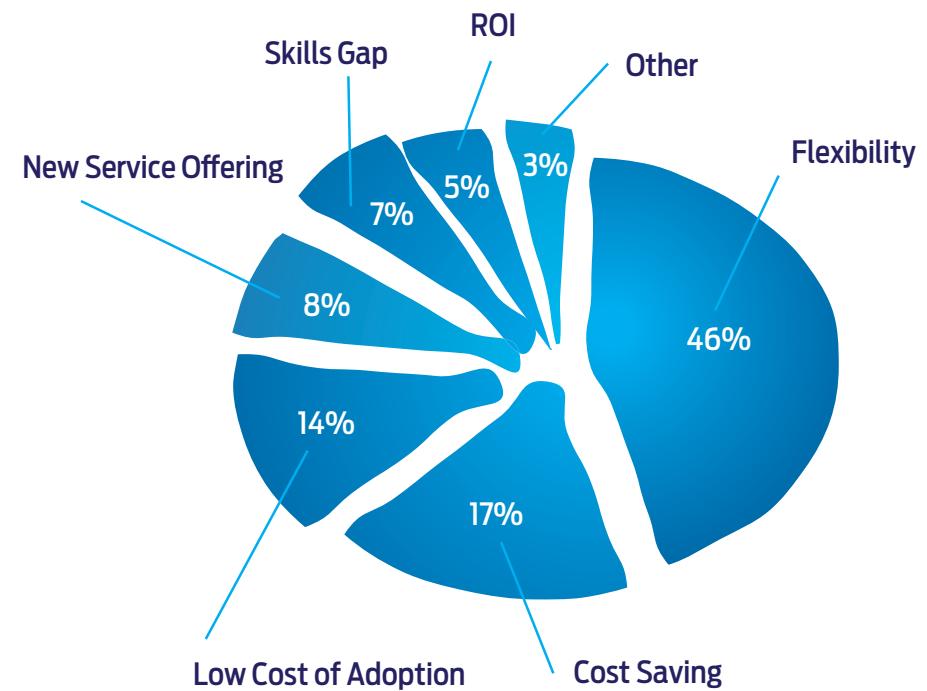

- Challenges facing SMB's help focus on cloud adoption
- Financial hardship / uncertainty and fluctuating demand all suit cloud model

Source: Edge Strategies Research

Why Cloud?

- **Flexibility, not cost savings, the big driver**
- **IT designed for the business, there & then, that is ready to grow is key – no need to invest for the future**
- **Most notable in small & micro businesses with 54% highlighting this as the primary driver for cloud adoption**
- **Cost savings, low setup fee and better cash flow all contribute**
- **Cost savings are a larger driver for medium and larger businesses, but flexibility is still a key factor**

Source: Cloud Industry Forum

What are they currently hosting?

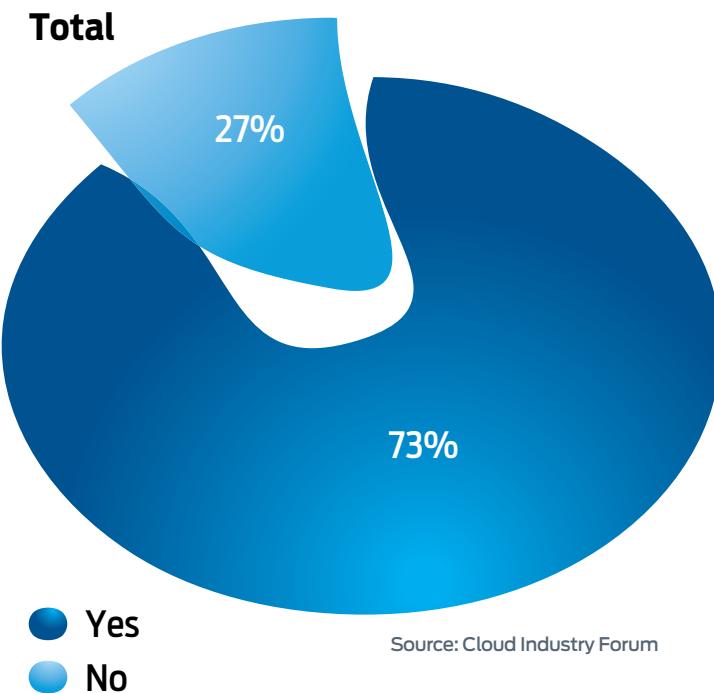

- Web services, such as hosting, ecommerce, portals and online marketing solutions were common
- Small and micro businesses are also using email as a cloud service, while larger SMB's often still use it on-premise
- File sharing, instant messenger services and online backup are also currently being used in the cloud
- Test & development platforms have also been popular

What are the growth products?

- Email, especially dedicated or private cloud email is increasing substantially (forecast 36% increase in 2012)
- Data storage & backup services also expected to have a 35% growth in 2012
- Collaboration services, web conferencing and other communication tools are growing fast

What are the growth products?

Do you expect your adoption of cloud services to increase over the next 12 months?

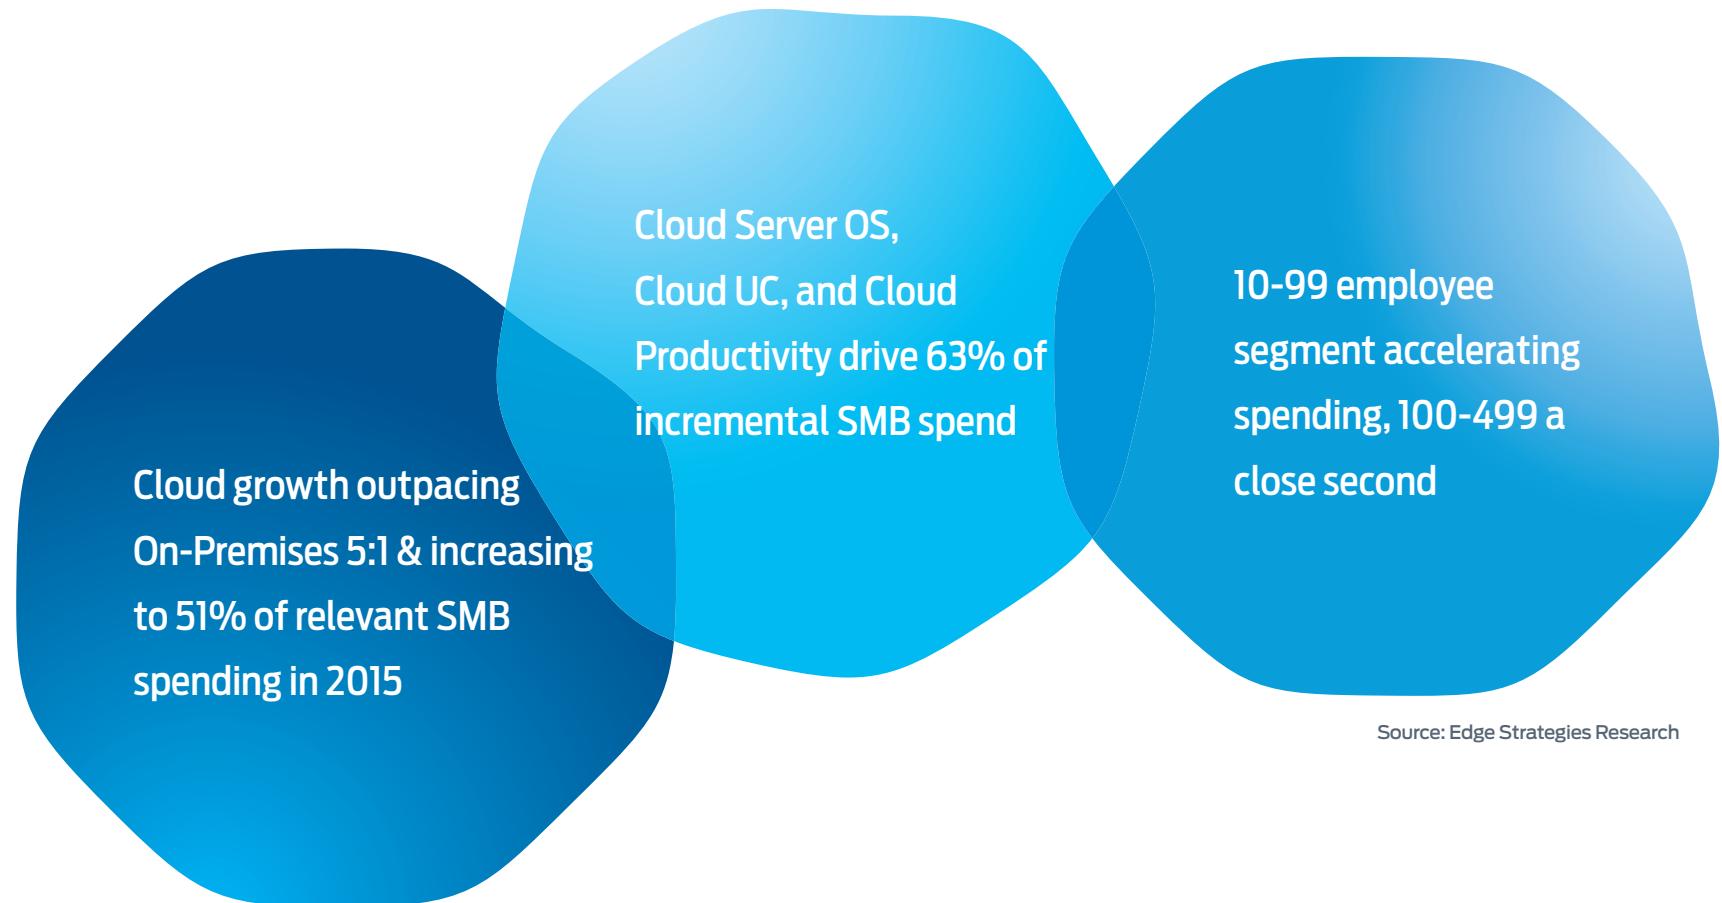

In what areas do you expect your adoption of cloud services to increase over the next 12 months?

Only asked of respondents who expect their adoption of the cloud to increase

Email services	36%
Data storage services	35%
Data backup/ Disaster recovery services	28%
Collaboration services	28%
Web hosting	26%
IT operations management	23%
Portal services	22%
Office automation	18%
Managed IT services	18%
IT asset management services	16%
Unified communications	16%
Advertising and online marketing services	15%
CRM	15%
IT security services	14%
Workflow systems	13%
Accounting and finance applications	12%
eShop services	11%
Service management / Help desk services	10%
Personnel and payroll	9%
Sales management	9%
Infrastructure as a service	7%
Partner relationship management	6%
Niche vertical applications	2%
Other	2%
Base	116

UK is following the US market

Concerns / Challenges

Only asked of respondents who either currently use cloud or will do it at some point in the future

	Total	No. employees	Fewer than 20	0-200	More than 200
Data security	62%		58%	66%	62%
Data privacy	55%		47%	57%	61%
Dependency upon internet access	49%		55%	56%	38%
Confidence in the reliability of the vendors	35%		34%	35%	36%
Contract lock-in	34%		34%	38%	30%

Data still the primary concern

- Security
- Privacy
- Sovereignty

Source: Cloud Industry Forum

Only asked of respondents whose organisations are required to store data

	Total	No. employees	Fewer than 20	0-200	More than 200	Private	Public
Hosted within the UK	47%		42%	43%	54%	48%	43%
On-premise	43%		54%	45%	32%	42%	45%
Hosted within the EEA	6%		2%	8%	8%	6%	7%
Other	4%		2%	4%	5%	3%	5%
Base	208	59	75	74	132	76	

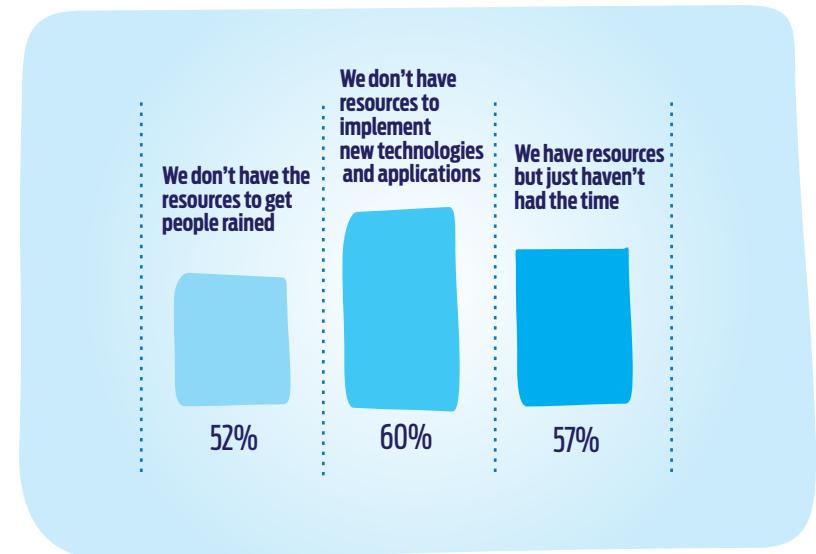

Secondary concerns

- Connectivity
- Reliability
- Contract lock-in

Source: Cloud Industry Forum

Who are SMB's asking for help?

- Cloud adoption is restricted by lack of time & resources – SMB's need help in implementing cloud
- SMB's need to work with technology suppliers to get the advice, support and deployment assistance to get cloud services in place
- Service Providers, Software suppliers and Industry leaders are key (36% of SMB's use as first contact)
- Getting the solution to suit the business requirement is key – SMB's that focus on this, get the benefits of cloud

Source: Edge Strategies Research

Cloud adoption

- Adoption of cloud has been faster in smaller companies in 2011
- Private & Public sectors are at similar levels of adoption now
- Satisfaction with current deployment of cloud services is at 96%, with 73% looking to expand their cloud services further in 2012
- 85% see cloud as a core part of their IT strategy
- Most common cloud services are still email, backup, storage and web hosting, reflecting back office services still driving adoption
- Cloud services are being adopted alongside on-premise services
